PROFILE

B.E. Computer Science (AI & ML) student passionate about backend development and machine learning. Experienced in building scalable data pipelines, web applications, and AI-powered solutions through an industry internship and hands-on projects.

SKILLS

Programming languages

C, C++, Python, JavaScript

Frameworks

React.js, Flask, Node.js, Express.js

Databases

MongoDB, MySQL, PostgreSQL

Tools

Git, Docker, Kafka, Spark, VS code, Postman

EDUCATION

Vidyavardhaka college of Engineering,

Computer Science(AI&ML) and Engineering 9.25 CGPA

2023 – 2027 | Mysuru

Relevant courses

OOPS, Database Management System, Data structures and algorithms, Operating System, Computer Networks, Machine Learning, Deep Learning.

EXPERIENCE

Hewlett Packard Enterprise(HPE), Project Intern

03/2026 – Present

- Contributed to ATLAS, a distributed telemetry platform for real-time analytics by processing telemetry data.
- Collaborated with a team of 5 in an Agile environment to develop scalable backend services.
- Optimized Ingestion APIs and TSDB workflows, reducing background job latency by 40% and improving throughput.

ACHIEVEMENTS AND CERTIFICATION

Finalists, HackRx6.0: Hackathon by Bajaj Finserv Health

08/2025

Built an LLM-powered document QA system, web automation and secured Top 8 among 1900+ teams.

Winners - INNOWAH! Innovation Challenge by PALS, IIT Madras

03/2025

Developed an AI-powered personalized learning platform and won in the Economic Growth category among 500+ teams.

AWS Academy Cloud Foundation course

Completed AWS Cloud Foundations coursework; currently preparing for the AWS Cloud Practitioner exam.

PROJECTS

Advanced Sign Language Detector

- Developed a real-time sign language recognition system using MediaPipe, OpenCV, and a Random Forest classifier to detect single- and double-handed gestures.
- Built an end-to-end machine learning pipeline for custom gesture dataset creation, feature extraction, model training, and real-time prediction.
- Engineered an 84-feature dual-hand representation with global normalization and integrated browser-based Text-to-Speech for live translation.

Tech Stacks: Python, Flask, OpenCV, MediaPipe, Scikit-learn, HTML, CSS, JavaScript.

Equiskill-AI

- Built an AI-powered learning platform enabling users to create personalized self-paced courses.
- Integrated Gemini API for automated note generation, quiz creation, and personalized learning content.
- Implemented authentication and content management features using Clerk and MongoDB.

Tech Stacks: Next.js, Node.js, CSS, Clerk, NeonDB, Vercel, Gemini API.

INVOLVEMENT

Elevate-U club, VVCE, Core Member

Organized and coordinated club activities to foster communication, teamwork, and leadership skills among students.

Peer Tutor

Conducted peer tutoring sessions on core computer science subjects and guided students in applying concepts to projects.
